

IT Intern Program

At WellPoint, we believe in creating opportunities for people who are passionate about making a difference. That's why we offer an exciting comprehensive IT internship program designed to provide unique, first-hand perspectives on delivering solutions that will utilize technology and data to better understand the health and health-behaviors of our members and leverage information technology to create programs and products designed to help improve the health and quality of life of WellPoint's members. Our ability to interface with our providers and vendors will also result in improved health care information that will benefit the lives we serve.

WellPoint has received numerous accolades for its accomplishments in business technology, including recognition in 2010 on *Information Week's* "Top Innovators" list. We are currently offering intern opportunities in the following technology areas:

- Application Development
- Database Administration
- Systems Architecture
- Lean IT
- Infrastructure
- Quality Assurance
- Systems Engineering/Analysis
- Audit/Compliance
- Project Management
- Information Security

Strong candidates for these opportunities will possess a major in Management Information Systems, Information Technology, Computer Science/Engineering. Study within at a graduate level is highly desirable. Applicants must have demonstrated strong analytical, problem solving, written and oral communication skills.

Project work during the internship program will require utilization of technology resources that may include Java, SQL, DB2, Business Objects, Teradata, .NET, C++, Mainframe, Service-oriented architecture, Oracle, SQL Server, Weblogic and/or IBM Web Sphere.

Apply online for consideration by using keywords "IT intern" in your search criteria. EOE
